// TECHNICAL WORKSHOP // SYSTEMS ARCHITECTURE

Build Lab: Systems & Kernel Foundations Workshop Registration

EXECUTIVE SUMMARY & DISPATCH INTENT:

Comprehensive hands-on systems programming clinic on Unix system internals, C memory architecture, and POSIX concurrency primitives.

1. WORKSHOP OVERVIEW

A hands-on technical workshop focused on low-level systems programming in Unix environments. Topics include virtual memory mechanics, pointer arithmetic, custom malloc implementations, and Linux kernel system call tracing via strace/perf.

2. SCHEDULE & VENUE

Date: April 12-13, 2025
Time: 10:00 AM - 05:00 PM IST
Venue: Department Seminar Hall & Distributed Systems Computing Lab, CSE Building.

3. HARDWARE & ENVIRONMENT PREREQUISITES

Participants must bring a laptop configured with Linux (bare metal or WSL2/VM), GCC 13+, Make, GDB, and Git. Toolchain installation assistance will be provided 30 minutes prior to session commencement.

4. CERTIFICATION & CONTINUATION

Active participants completing the custom slab allocator assignment will receive a verified FCIT Systems Engineering Credential and priority selection for upcoming kernel development sprints.
